

Mobile Testing Checklist			
Device-Specific Features		Result	Comment
	Content – Text size, Content adjustment, Responsive design		
	UI- Touchscreen gestures- swipe, zoom, pinch, multi-touch, shake		
	Pre-install software (Such as for export or import file)		
	Check if battery down		
	Check making/Receiving voice calls while the app is running		
	Check memory utilise overflow		
	Check resuming App from the same point as left at the time of switching to another app		
	Check happened if memory (SD card / internal memory) full and try to export		
	Check data will be saved (SD card / internal memory)Check in portrait / landscape mode		
	Check application for empty / large database		
	Check screen off / screen saver off.		
	Check minimise app while loading shows		
Connectivity and Network Issues			
	Check data connection will be used (Mobile operator / wifi)		
	Check if data connection loss while saving data		
	Check if data connection slow while saving data		
	Check both connection are open --> lost wifi connection		
	Check both connection are open --> slow wifi connection		
	Check shows error message if connection failed		
	Check app bandwidth consumption		
User Experenice			
	Check app logo		
	Check app version		
	Check menu logo		
	Check list page are searchable		
	Check list page are sortable		
	Check list page are filterable		
	Check screen resolution		
	Check how many columns will display in list / details page		
	Check able to export from list page		
	Check able to print from list/ details page		
	Check able to create design custom forms details page		
	Check able to fill up fields in details page		
	Check able to click button in list /details page		
	Check navigation across different screen		
	Check responsiveness of the App Logo and Name		
	Check easy navigation across different screens		
	Check responsiveness of drop down lists		
	Check prompt display of errors and warning messages		
	Check spelling, typo and grammar in all kind of messages and labels		
	Check inactive buttons and active buttons		
	Check date format or date picker		
	Check amount with rounding figure		
	Check currency format		
	Check text field format		
	Check number key pad when number text field		
	Check auto save available		
	Check delete feature		
	Check Custom name feature or behaviour		
	Check description field enough space to enter data		
	Check easy way to 'collapse or expand' all data		
	Check all select feature in list page		
	Check user profile settings		

	Check notification feature available (Such as if new project add, delete or modified notification)		
Data Testing			
	Data Sync issue If data added from mobile app but not showing in web app.		
	API testing		
	Check image / document upload and limitation		
	Check document / image view feature		
	Check list page data count shows or not		
	Check server down time		
	Check xero/ other third party software data sync (if applicable)		
	Check CRUD operation		
	Check concurrency message		
	Check will data save offline mode		
	Check data create/update/delete in offline but what will be happened when its in online		
	Check previous data access cache		
Security Testing			
	Check login credential attach with mobile fingerprint		
	Check 'Remember me' feature in login		
	Check app sign out / Sign in feature		
	Check cache clear and run application again		
	Check user logged in but inactive / locked from admin		
	Check non admin user logged in what data s/he can access		
	Check customer's data security		
	Check customer payment data security		
	Check network protocols security for running application		
	Check user security policy		
	Check one user can see another user data or information		
	Check antivirus related issue		
Performance Issue			
	Check time taken to launch the application		
	Check application performance at times of peak load conditions and continual key pad entry		
	Check application performance in low device battery and charging conditions		
	Check Integration with the device and other applications without hampering performance		
	Check application install/uninstall successfully within the desired timeframe		
	Check displaying error messages and exits gracefully at times of low memory issues		
	Check app performance at the time of a Network problem and error alert prompts		
	Check application performance when the Network is back in action		
	Check memory Consumption		
	Check hardware Utilisation		
	Check app behaviour if app crashed		
	Check server performance		
	Check Install or update app feature		
Feedback Feature			
	Check 'Contact Us' feature		
	Check help guide available		
	Check legal feature available (Such as 'Term and condition' and 'Privacy Policy')		

[illegible]
